1. Test depths are referenced to the middle of the vane.
2. Load cell was maxed out during the test. The vane blade was noted to be damaged when it was brought back to ground surface.
3. The vane blade was damaged during testing and it is unknown when it occurred. A damaged vane blade may compromise data quality. Photographs of the vane blade are provided in the data release folder.
4. A stiff layer was encountered prior to the vane test depth. It is possible the vane blade was damaged during this push. A damaged vane blade may compromise data quality.
