Subject: South dam - pre CBL and berm construction
Attachments: IMG_0033.JPG

Hi Les,

Attached is a photo of the south dam looking towards the perimeter. The orange stakes are at 25m intervals. The current plan is to place CBL to form a platform level with the existing surface, and a berm. Tailings will be spigotted in and hopefully only the coarse fraction of the tailings will be retained within the cell.

Howard is very keen on this test cell.

Greg
