**Subject:** Zone C tracking

Amanda:

As part of the weekly reporting program, we would like you to create a graph that shows the cumulative tonnage of Zone C that has been placed on the dam vs. the required tonnage based on the schedule which was 230,000 t/month. The graph will allow us to track their progress with the Zone C material and will also allow us to warn them when they are falling behind. We will also be putting on a few trigger points which will be used to inform the mine when they are falling too far behind in this category. Put a graph together and forward it to me for review. Once we have decided on the details the graph should be updated daily based on progress reports from the mine.

Also update the project schedule on a weekly basis and include it in the weekly report as well.

Call me if you have any questions.

Les Galbraith, P.Eng.
