

Eric:

Attached are the upstream toe drain drawings. I have put a hold on the conduit through the abutment and will get this to you early next week. The drawings show that the top of the upstream toe drain is level at el. 951. This works if they are going to place Zone U with trucks, but if they are planning on using cell construction then the top of the drain will need to be protected from erosion. If this is the case then submit a design change request form on detailing how the top of the drain will be protected. Attached are drawings 220 225 226. Call me if you have any questions.

Les Galbraith, P.Eng.
