Subject: Back to design at corner 4 - Mt. Polley
Attachments: SKMBT_C35112072415010.pdf

Blythe,

Please find attached the sketch of the plan to get back to design at corner 4. This is the worst case near stn 5+00 as the stations increase towards stn 6+00 it gets closer to design.

The upstream Zigzags are an optional feature if they want to reduce the volume of till they utilize while maintaining the minimum 5m width of the core.
